

ADVANCED EFFLUENT TREATMENT PLANTS WITH ZERO DISCHARGE CONCEPT

TEXTILE INDUSTRY

Canadian Clear Offers innovative Technological Solutions for achieving “Zero Discharge” and effluent water recovery for reuse. We offer complete “Turnkey Solutions” for “Effluent Management” as below:

- ✦ a) Effluent Treatment
- ✦ b) Effluent Re-Cycling
- ✦ c) Reject Management
- ✦ d) Waste Recovery

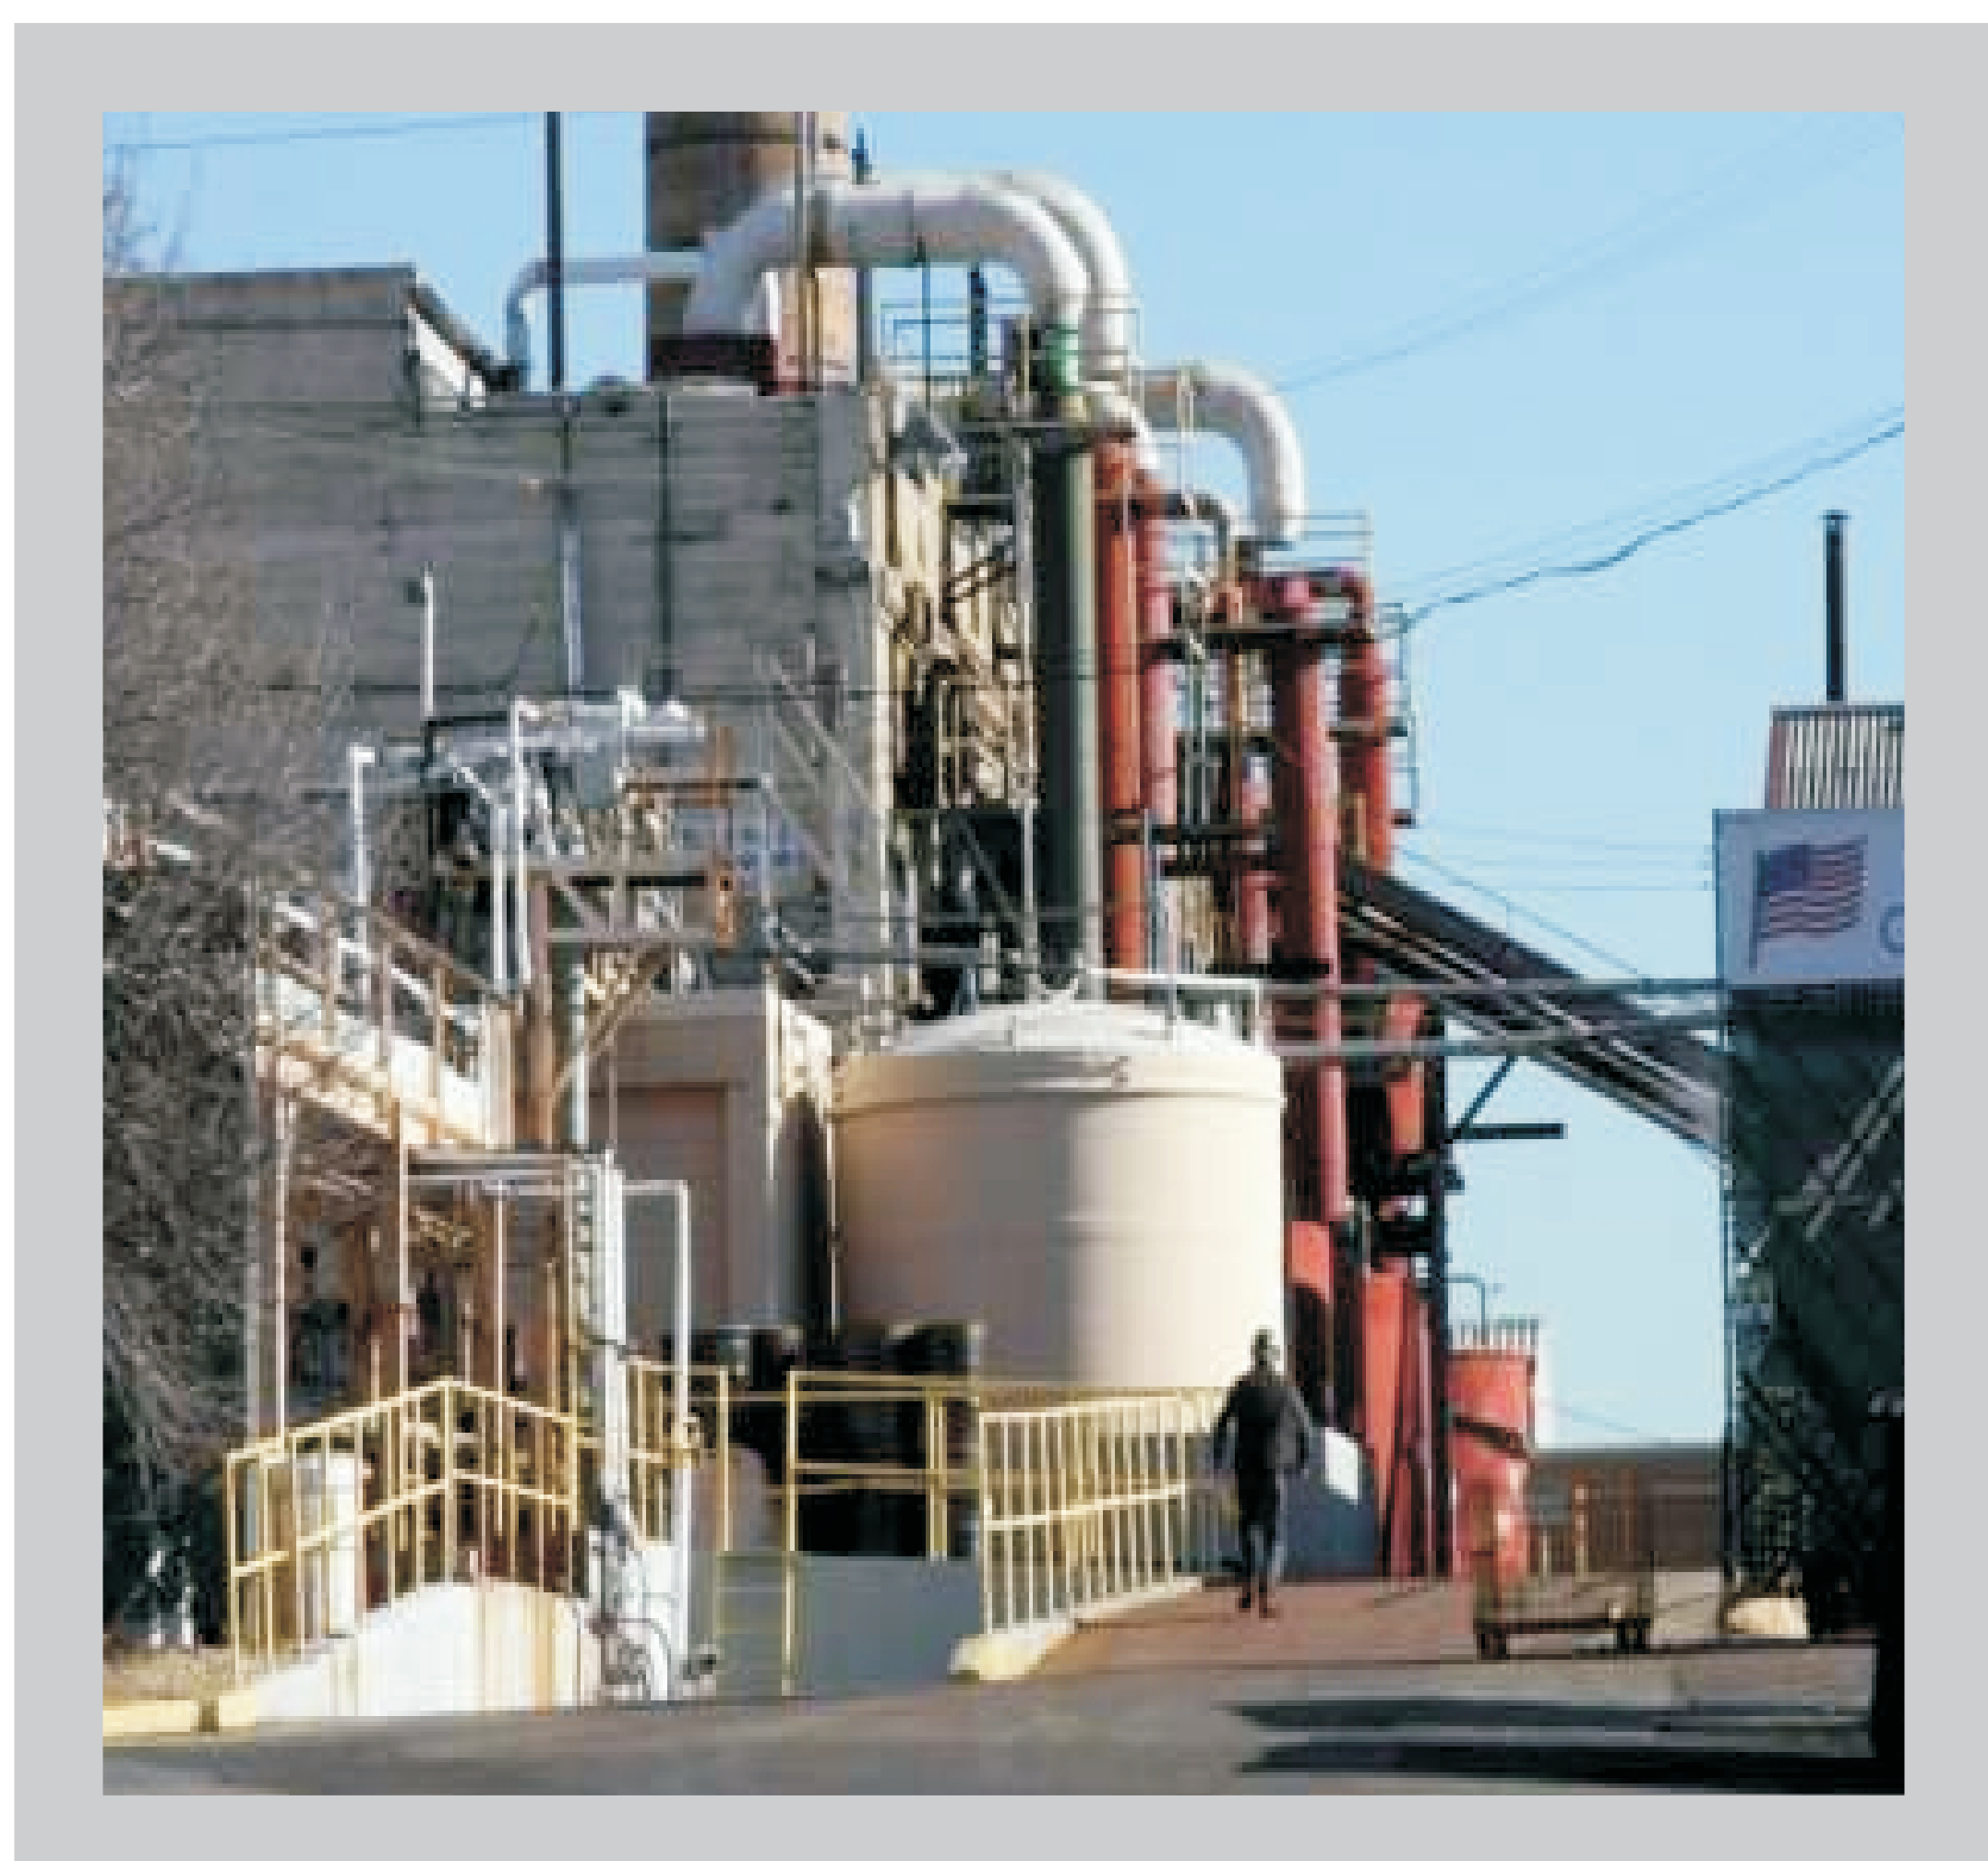

TEXTILE INDUSTRY

TANNERIES

ADVANCED OXIDATION - CPR

Canadian Clear is a master in Textile Dyeing Effluent Treatment Solutions. Our patent marked technology of Ozonisation with CPR has been creating ripples in the industry for the past two decades. The effectiveness of this technology results in efficient effluent treatment and water reuse.

CHEMICAL INDUSTRIES

PAPER & PULP INDUSTRIES

BREWRIES

ADVANCED OXIDATION WITH MBR

We have also implemented ozonisation with MBR for the segments of Tannery Dyeing and other Industrial Effluent Treatment Solutions.

CANADIAN CLEAR is one of the most successful companies in setting up projects which can handle different type of wastewater in a single unit, which is economical and need of the hour.

Advantages of using Canadian Clear Technology compared to other technologies are the following effluent quality parameters is illustrated below:

- ✓ Better COD removal efficiency (+ 5% to 10%)
- ✓ Better Chromium removal efficiency (+ 5% to 10%)
- ✓ Better Sulphur removal efficiency (+ 30%) and equal Nitrogen removal
- ✓ Lower costs for sludge discharge (reduction in sludge volume 50% compared to other technologies)
- ✓ Lower costs for discharging wastewater to municipal treatment plant.
- ✓ Lower chemical consumption
- ✓ Compared to other technologies the total annual costs are approximately 35% lower. The specific investment costs for the plant is higher than the other technologies. The lower operational costs however more than compensate for these extra investment costs.

Our technology can be adopted for all types of effluents generated from variety of industries using different applications / processes. The Plant shows a smart combination of treatment technologies to treat the complex tannery effluent realizing high reduction rates (surface water discharge levels).
